SUMMARY

Driven Computer Science & Engineering student specializing in Gameplay Systems Programming, technical art pipelines, and high-performance game architecture. Proven track record of developing optimized, interactive 3D virtual environments using C#, C++, and Unity. Adept at managing asset optimization, custom shader networks, and material node workflows in Blender (O Grade) alongside interactive UI/UX prototyping in Figma. Focused on memory management, object-oriented software patterns, and engine-level optimization.

TECHNICAL SKILLS

- **Game Development & Core Engineering:** C++, C#, Unity Engine, Object-Oriented Programming (OOP), 3D Vector Math, Game Loop Optimization, Memory Management, Data Structures & Algorithms (DSA).
- **Technical Art & Design UI/UX:** Shader & Material Node Graph Architecture, Blender (Advanced - O Grade Performance), Figma (Interactive Gameplay Interface Wireframing & State Flows).
- **Systems & Collaboration:** Network WebSockets, Version Control (Git/GitHub Branching, Merging, PR Workflows), Visual Studio, Technical Documentation.

TECHNICAL CERTIFICATIONS

- **User Experience (UX) Design Principles Certification** – IIT Roorkee ([View Certificate](#))
- **Data Structures & Algorithms Engineering Certification** – Cipher Schools ([View Certificate](#))

CORE GAME DEVELOPMENT & TECHNICAL ART PROJECTS

HOLLOW LOOP | 3D Psychological Horror Game & Launcher (C# / Unity) – [GitHub Repository](#)

Lead Gameplay Systems Programmer

- Formulated a fully integrated Game Launcher UI simulation natively linked with an event-driven 3D psychological horror codebase to handle real-time configurations and client runtime initializations.
- Architected highly reusable, modular object sub-systems managing core player mechanics, a non-volatile absolute checkpoint saving mechanism, item inventories, and smooth scene progression.
- Applied comprehensive Object-Oriented Programming (OOP) principles and behavioral design patterns to secure a 30% reduction in codebase coupling.
- Throttled spatial mesh rendering queues, runtime engine asset loading, and computational script loops to establish a stable performance marker of 60+ FPS on mid-range target hardware (NVIDIA GTX 1650 / AMD Ryzen 5).

C++ Navigation & Pathfinding Engine Simulation (C++) – [GitHub Repository](#)

Core Systems Programmer

- Developed a lightweight, standalone 2D navigation grid simulation utilizing native C++ to demonstrate algorithmic pathfinding efficiency and game-loop execution constraints.
- Implemented specialized data structures to manage spatial node parsing, preventing heap fragmentation and reducing overhead via runtime pointer recycling.
- Engineered dynamic obstacle mapping constraints that recalculate real-time routing matrices instantly without stut-tering core rendering threads.

Stylized Isometric Environment Animation (3D Technical Art / Blender) – [Watch Animation Video](#)

3D Environment & Light Pipeline Artist

- Sculpted, modeled, and animated an atmospheric cyber-noir isometric viewport environment utilizing complex shader networks and 10+ custom emissive material node groups.
- Executed rigid low-poly meshes, explicit keyframe animations, and multi-angle camera sequences satisfying an “O Grade” technical execution standard.
- Fabricated clean, layout-optimized 3D assets yielding a 40% decrease in vertex count constructed specifically for unhindered render pipeline performance when deployed within external engine levels.

TRAINING EXPERIENCE

Cipher Schools

June 2025 – Aug 2025

Software Engineering Trainee ([View Internship Certificate](#))

- Systematized production-grade algorithm trees and audited 20+ peer code review entries using standard Git/GitHub collaborative workflows.

LEADERSHIP & VOLUNTEER EXPERIENCE

Local Community Support Center

June 2024 – July 2024

Volunteer Chemistry Instructor (11th & 12th Grade) ([View Recognition](#))

- Conducted targeted Chemistry lessons to a group of 15+ senior high school students at a local orphanage, breaking down complex foundational concepts and equations.
- Devised curated learning tracks to spark scientific curiosity, improve student retention rates by 25%, and build academic confidence in an underprivileged demographic.

EDUCATION

Lovely Professional University
Bachelor of Technology in Computer Science and Engineering

Aug 2023 – Present

- Core Coursework: Data Structures & Algorithms, Database Management Systems, Advanced Systems Engineering.
